

## Brain Therapy for Children & Adults

Brain Therapy is an integration of craniosacral, fascial and dental (TMJ, orthodontics, and other oral aspects) therapies for the assessment and treatment of children and adults. You will learn the basic qualities of brain function and how to attain maximum central nervous system capabilities for your clients. Dr. Gillespie's goals for this seminar are to clinically integrate all three aspects of your muscle therapy background in three days and help you effectively practice this approach immediately after the course. Dr. Gillespie's second book, "Brain Therapy for Children and Adults", is the syllabus for this seminar. Both of his books are included in the seminar fee. Early registration is important since you need to read the books before the seminar. The maximum number of students will be 12, allowing for personal attention.

Date: October 21, 22 and 23, 2005

CEU's: 22.5

Cost: \$800.00 advance registration only

Hours; Friday 8:30am - 5:30pm:

Saturday 8:30am-5:00pm

Sunday 8:30am - 4:30pm
